

**Amendments to the Specification:**

*Please amend the paragraph (section) beginning on page 7, at line 12 as shown below:*

As best seen in Figures 2-5, the headrest 22 includes a two-piece housing 30 formed, for example, of a pair of oppositely-opening generally-cup-shaped halves. The first, relatively-rearward half, coupled in a suitable manner to the upper portions of the posts 24, defines a "base portion 32" that is intended to move in concert with the upper portion 28 of the backrest frame ~~[[18]]~~ 20 in a rear collision. The second, relatively-forward half defines the occupant-engaging "contact portion 34" of the headrest 22 that is supported on the base portion 32 for relative translational movement on a pair of tracks 36 that, in the exemplary seat 10, are conveniently molded into the opposed, complementary lateral walls 38,40 of the base and contact portions 32,34.
